360EnterpriseSuite Features and Benefits:

FEATURES CHECKLIST!

System Overview

Most companies are limited by their legacy ERP system, doing things the same way as their competitors with no visible competitive advantage. 360EnterpriseSuite is a modern, web-based, customizable .NET ERP solution that eliminates modern "going global" barriers .

Increase Employee & Sales Productivity!

360EnterpriseSuite allows all of your employees to enter and share company data concurrently in real-time across town or across the world! Customers can securely price, quote, order, and even check inventory from the field using a web browser or a Smart Phone!

The Last ERP Accounting System You Ever Need To Buy!

360EnterpriseSuite will scale globally along with your organization. Imagine having customers in China entering orders next week! Start out with a one-server configuration, and as your company and needs grow the 360EnterpriseSuite will scale with your organization by simply adding inexpensive servers to the configuration. There are no per user, per server, or per processor licensing or pricing, and nothing more to buy, 360EnterpriseSuite will run on any number of servers!

360EnterpriseSuite Pricing and Licensing

Call for a Quote

Pricing depends upon a variety of factors such as modules needed and special business requirements that we need to discuss. There are 1-server, 2-server, 3-server, and multiserver IT configurations depending upon size of company and transaction volume. Upgrades and Customizations are usually required for companies that want more competitive advantage. These upgrades and customizations are performed by BCA Technologies as part of a maintenance agreement.

Your 360EnterpriseSuite application is hosted in a secure hosting facility. Your IT staff may have access to the database for integrating in-house applications, backup, and maintenance. Access is no different than accessing the server in your facilities server rack. For an additional fee, the application can be hosted at your data center or a third party location, if you use dedicated server hosting or Co-Location of your own server(s).

Since 360EnterpriseSuite is web-based, no other network, software or computer upgrades are necessary - ever. If desired, you can run your existing ERP/Accounting software concurrently during the transition period – minimizing risk and simplifying historical lookups.

CONTACT BCA TECHNOLOGIES TO DISCUSS HOW 360EnterpriseSuite CAN HELP YOUR PARTICULAR SITUATION.
